

I need a table of all the genres purchased by customers in Canada.

```
SELECT Genre.Name FROM Genre
JOIN Track ON Genre.GenreId = Track.GenreId
JOIN InvoiceLine ON Track.TrackId = InvoiceLine.TrackId
JOIN Invoice ON InvoiceLine.InvoiceId = Invoice.InvoiceId
JOIN Customer ON Invoice.CustomerId = Customer.CustomerId
WHERE Customer.Country = "Canada";
```

```
SELECT * FROM Artist;
SELECT EmployeeId, LastName FROM Employee;
SELECT FirstName || " " || LastName AS "Name" FROM Customer;
SELECT * FROM Invoice
WHERE Total > 8;
SELECT FirstName || " " || LastName AS "Name" FROM Customer
WHERE "Name" LIKE "%m%";
SELECT FirstName || " " || LastName AS Name FROM Customer
WHERE Name LIKE "%m%";
```
